

**If you are experiencing any changes
in memory or thinking**

**(such as problems with slowed thinking,
paying attention, or solving problems)
that are causing difficulty with
your normal activities**

PLUS

**ANY of the following problems:
slowness of movement or walking,
seeing things that aren't really there,
or acting out your dreams?**

If so, please tell your doctor today.

**They may be signs of a neurological condition
called Lewy body dementia (LBD).**

**LBD is a progressive condition, but help is available!
Talk with your doctor today and learn more
about LBD at www.lbda.org.**
